Project Overview

This Digital Literacy Project was completed as part of the CSE0001 course to develop essential skills required in the digital world. The project is based on the role of a Student Digital Ambassador, whose responsibility is to guide peers in using digital tools safely and effectively.

The project consists of five tasks, each focusing on a different aspect of digital literacy. These include creating an awareness infographic, building a digital portfolio, exploring coding and collaboration platforms, understanding email etiquette, and learning about cybercrime and online safety.

Through this project, I gained practical experience in using platforms like GitHub, LinkedIn, and Google Forms. It also helped me understand the importance of responsible online behaviour and professional communication. Overall, this project enhanced my digital skills and prepared me to use technology more effectively in academics and future career opportunities.

Task 1-Infographic

The work in Infographic is made by using the online website **Canva(www.canva.com).**

Starting :

Selecting the template to complete the task .

After selecting , I used the reference of my course video lecture to write the theory inside the infographic .

Selecting the most appropriate word to define and make understandable all the terms

This includes the three terms Digital Literacy , Safe Internet Practices and Useful tools for Students .

- Digital Literacy – It means the ability to use digital tools and internet safely and effectively.
- Safe Internet Practices- It means to use strong password , don't share personal details , etc..
- Useful Tools For Students – Like Google Docs , GitHub , Canva etc … .

Ending :

By using a Question **Why It Matters?**
Simple and straight answer to this Question will be :

Digital literacy helps students stay safe online, build skills, and prepare for future careers.

Task 2 - Digital Portfolio

In this task , you will the GitHub , LinkedIn and Kaggle Account .

- **GitHub :** GitHub is a web-based platform that hosts Git repositories, providing a cloud-based interface for developers to store, manage, track, and collaborate on code projects .
- **LinkedIn :** LinkedIn is a professional application used by about 1 billion peoples over 200 countries .This is a platform where you share your professional achievement , seeking for jobs here, sharing resume b/w the companies and the employee seeking for jobs etc..
- **Kaggle :** Kaggle is an online community and platform for data science and machine learning, acquired by Google in 2017. It allows users to find datasets, participate in competitions to solve complex problems, and use cloud-based code notebooks (similar to Google Colab) to build models. It is widely used for learning, building portfolios, and networking.

Task 3 - Platforms Exploration

This task of project contains the details how you can use the platforms provided free online to all of us .

In this , there will be two things mentioned :

1. Hacker Rank Certificate
2. Google Form

Hacker Rank – This is a Online Coding platform which provides users many options to be explore inside their website . They will also certify the user by Certificate to their e-mail id . They also have the point based rank programme they will gave you a problem and then solve it and got the point and go ahead in the rank .
I also shared my Problem Solving (Basics) certificate in the repository

Google Form – This a Google's website to make the form for the user to get the different responses by the peoples . This will offer many option to answer the question while creating the form like multiple type , short type , paragraph type , etc. . After this, needed to publish the form and then start to share the link of the form to get the response from the peoples .

Task 4 – E-mail Etiquette

In this task, I learned the importance of professional communication through email and responsible behaviour on social media. I wrote two formal emails, one requesting an assignment extension and another applying for a summer internship. While writing these emails, I focused on maintaining a proper structure, including a clear subject line, polite greeting, and formal tone.

I also created a checklist of social media do's and don'ts to promote responsible online behaviour among students. This helped me understand how small mistakes in digital communication can create misunderstandings or leave a negative impression. Overall, this task improved my email writing skills and made me more aware of maintaining professionalism in online interactions.

Task 5 -Cyber Crime Awareness

In this task, I explored the concept of cybercrime by studying a phishing case related to bank KYC fraud. I learned how attackers use fake messages and links to trick users into sharing sensitive information such as OTPs and banking details. It was surprising to see how easily people can fall into such traps due to lack of awareness.

I also created a prevention checklist to help users stay safe online by following simple practices like verifying links, using strong passwords, and not sharing personal information. This task made me more aware of online threats and the importance of digital safety. I will be more cautious while using the internet and ensure that I follow safe practices in the future.

Conclusion

This Digital Literacy Project helped me understand the importance of using digital tools effectively and responsibly. Through different tasks, I learned how to create informative content, build a professional online presence, and communicate properly using emails. I also explored useful platforms like GitHub and Google Forms, which will help me in my academic journey.

The cybercrime task made me more aware of online risks and how to stay safe while using the internet. Overall, this project improved my digital skills and increased my confidence in using technology. It has prepared me to become a responsible digital user and apply these skills in the future.
